Professional offices are the strongest first segment

5,000 synthetic leads reveal both acquisition friction and a clear pilot audience

7.36%
lead-to-activation rate

17.6 days
mean time to activation

₹15,053
blended acquisition cost

Funnel stage	Reached
Lead / contacted	5,000 / 3,406
Needs assessed	1,974
Quote accepted	861 (43.6%)
KYC / activated	588 / 368

Segment	Activation	CAC
Professional offices	11.1%	₹10,695
Micro retail / services	4.1%	₹20,007
Multi-site businesses	11.0%	₹15,614
Small manufacturers	12.8%	₹15,324

385 leads dropped because quotes were slow or complex. Offices combine scale with the lowest segment CAC.

Source: smb_leads.csv, Apr–Jun 2026. CAC = acquisition spend across all leads / activations. Rates are descriptive, not causal.

The opportunity is a complete buying journey

Bundles and digital discovery already exist. Our differentiation must survive a live journey test.

Benchmark	Publicly documented offer	Public journey evidence	Implication for Udyam
JioBusiness [1]	Integrated connectivity, voice and digital services	Tariff options and self-care for bills / service requests	A bundle and one portal alone will not differentiate
Vi ReadyForNext [2]	Digital maturity assessment and tailored MSME solutions	Assessment, recommendations and expert guidance	Connect advice directly to an eligible, priced order
Airtel Business [3]	Broad connectivity, cloud and security portfolio	Expert callback for a customised solution	Preserve expert help for complex sites and exceptions
Udyam prototype	Catalogue rules with clear bundle explanations	One session for quote, consent, mock KYC and status	Test completion rate, eligibility accuracy and activation time

Proposed advantage: one profile across the journey, with a clear reason for each human handoff.

Reviewed 1 Nov 2026. Public pages do not establish that competitors lack equivalent capabilities.

One office journey, from needs to installation

Implemented walkthrough: a five-person office, one site, tier 1 or 2, budget ₹3,500 before tax

1 Advisor

“What must stay online?”

Choose language.
Capture users, sites, budget, current tools and uptime needs.

Why this bundle?
300 Mbps for staff.
Backup for outages.
Email and security for five users.

2 Quote

Product	₹ / mo
Fibre 300 (P02)	1,499
Backup (P09)	499
Email × 5 (P16)	625
Security × 5 (P20)	495
Total before tax	3,118

Setup ₹1,500
12-month commitment
Backup toggle: −₹499/mo

3 Smart KYC

Consent before upload

Mock GSTIN / Udyam lookup, OCR extraction and applicant confirmation.

Mismatch or inactive GST?
Explain the issue and route to review. No GST?
Show eligible products.

4 Tracker

Order UD-001
KYC complete
Site check pending

Typical install: 5 days after clearance. Each product has a status.

Delay or failure?
Show reason, revised ETA and assigned partner.

Catalogue-minimum demo prices. Checkout itemises an assumed 18% tax. Payments and installation events are simulated.

Platform Partner unstop

Browser rules control the demo decisions

Groq powers explanations; browser rules control pricing, eligibility and document checks

Privacy controls

Consent gates uploads. KYC stays in browser memory. No identifiers enter AI prompts. Reset erases the demo state.

Failure controls

Invalid bundles and failed KYC block checkout. A payment retry keeps the order ID. Event controls simulate delays.

32 tests passed; live Groq advisor verified. Model: openai/gpt-oss-120b. Payment and installation remain simulated.

An office pilot tests the full operating model

Proposed 12-week rollout, followed by six-month retention measurement

Weeks 1–2	Weeks 3–6	Weeks 7–12
Build and validate	Pilot professional offices	Expand after evidence
Catalogue and KYC tests. Hindi + English review. Confirm install capacity.	1,000 comparable leads, randomised 500 / 500. Digital vs current journey.	Add micro businesses. Introduce ₹1,597 starter. Keep complex sites assisted.

Partner role and incentives

Keep lead attribution. Pay for activation and 30-day retention. Give partners consented handoffs, site visits and KYC exceptions.

Release gates

All catalogue tests pass. No false KYC approvals on the curated test set. Failed payments resume safely. Track missed installation promises.

Micro starter: P01 fibre ₹999 + P07 mobile ₹299 + P18 website ₹299 = ₹1,597/mo before tax, ₹0 setup, 12-month bundle term.

Platform Partner unstop

The pilot targets 18% activation and lower acquisition cost

Professional-office baselines only. Targets and economics below are hypotheses for validation.

Metric	Observed baseline	Pilot target
Lead-to-activation	11.1% (138 / 1,247)	18% within 30 days
Mean activation time	16.9 days	≤7 days
Acquisition cost	₹10,695	≤₹8,500
Six-month churn	13.8% (19 / 138)	≤10%

Illustrative scale case

1,000 office leads

111 baseline vs 180 target activations
69 additional customers

₹14.84 lakh ÷ 180
≈ ₹8,244 acquisition cost

₹2.15 lakh added monthly revenue
at ₹3,118 per new customer

Scale only after the pilot improves conversion without weaker KYC, higher complaints or missed install dates.

Scenario: historic spend per 1,000 office leads ≈ ₹11.84L + assumed ₹3L incremental cost. Revenue excludes tax, churn and delivery costs.
